

WHO PAYS FOR WHAT?

Many items we provide qualify for funding through the Alberta Aids to Daily Living program. Following an assessment we can determine if a patient is eligible for funding. We are also authorized to provide services with the WCB, DVA, NIHB, and RCMP agencies. Also, our clinicians are recognized with many private insurance companies as an eligible provider of service for reimbursement.

REGIONAL CLINICS

We hold monthly clinics in Central and Northern Alberta.

We manage all appointments for these clinics at our main office in Edmonton. Please call 1-800-387-5053 ext.0 to book an appointment or to inquire if we offer a clinic in your local area.

WHO WE ARE & WHAT WE DO

Our clinical team includes professional certified clinicians who evaluate and design Orthoses (braces) based on a patient's diagnosis and requirements. We take a holistic approach when designing orthotic treatments for any part of the body that may be affected by the following conditions:

Arthritis, diabetes, stroke, multiple sclerosis, trauma, foot disorders, plantar fasciitis, cerebral palsy, amputation, ligament instabilities, heel spurs, muscular dystrophy, spinal cord injuries, polio, ALS, CMT, spina bifida, carpal tunnel, and many other medical conditions.

CUSTOM MADE VS. CUSTOM FIT

When we say something is custom made, it is 100% custom made. All custom items are manufactured to a mold of a patient obtained via casting procedure or digital impression. All devices are manufactured by our well trained Orthotic Technicians in our laboratory which is located above our clinic. There are many options when considering a custom fit or custom made device. This is why we suggest all patients book an appointment for a free assessment to provide them their best options.

Providing the Best Technology for Motion Since 1979

FOOT ORTHOSES

Patients have many different options regarding the design of foot orthoses and where they can go to get them. We provide custom designs which are completely fabricated in our facility to an impression/mold of the feet. We do not customize a template design that best matches your feet. Depending on which design is required, we use a digital method or traditional casting techniques to obtain the mold of the feet. We offer free assessments, do not charge for follow up appointments if required, and any adjustments are done on the premises while the patient waits.

ANKLE BRACING & WALKING BOOTS

Various designs are available in stock from suppliers including: Donjoy, Med Spec, Aircast, Ossur, and many others not available in typical drug stores. We provide an assessment and fitting for all items to make sure the item functions and the user understands how to use the item correctly.

KNEE BRACING

Since 1982, we have been designing and fabricating our own line of custom knee bracing options. We have the experience that matters when determining which brace would be best suited to the patient and the ability to alter our designs to meet specific needs. Whether ligament, arthritic, or other knee conditions, we have many options available. All custom designs manufactured on site provide a quick turnaround with servicing and repairs done within 24 hours. We also have a large selection of knee sleeves and knee wraps in stock and have access to numerous suppliers if a different design is required.

LEG BRACING

Bracing individuals who have deficits caused by polio, stroke, multiple sclerosis, cerebral palsy, or other pathologies often utilize an Ankle Foot Orthosis (AFO) or Knee Ankle Foot Orthosis (KAFO). These braces are highly specialized and are manufactured using plastics, carbon fiber, and other materials. Our Orthotic Technicians have over 20 years experience each and understand the complexity of these designs. Each brace is custom designed to the needs of each patient.

SPINAL

There are various cervical collars available that are custom fit to each patient. Newer technologies available have made these items more comfortable and easier to use. We also manufacture full custom clamshell TLSO's and offer various off the shelf bracing for the spine including; chair-back, and

Jewett styles. Our skilled technicians can also customize less rigid lumbosacral supports that are an intimate fit and easier to don and doff.

SHOULDER

While complex and challenging to brace effectively, we have found success using a few different designs. Using strapping and/or lacing we can control abduction and external rotation without limiting the users function. We can also customize various designs which we can access from our many suppliers.

WRIST/HAND/ELBOW

There are many custom options available in leather, plastic, or carbon fiber designs. In addition we have numerous custom fit items that are not found in typical drug stores.

CUSTOM FOOTWEAR

Custom Made Footwear are only needed for people who have medical needs or biomechanical needs that cannot be aided through standard footwear, or footwear with special modifications.

Typical examples of reasons for needing Custom Made Footwear are: Charcot foot, foot deformities or amputation, crush injuries, severe arthritis, severe hallux valgus with hammer toes, significant Diabetic complications, as well as a number of other complex issues.

Custom Made Footwear are not Orthopaedic Shoes. Orthopaedic shoes are shoes that support or accommodate the mechanics and structure of the foot, ankle, and leg which are specifically designed to support or accommodate a particular medical condition.
